CUSTOM BUILT PLASTIC PALLETS INTRODUCES NON-SLIP DECK BOARDS

James Fischer, CEO of Jifram Extrusions, Inc. announced that Custom Built Plastic Pallets now offers non-slip deck boards for the company's line of custom sized plastic pallets.

The new deck boards are constructed of rigid PVC for maximum strength and integrity. Soft ridges are co-extruded with the recycled rigid PVC to add additional gripping capabilities.

Custom Build Plastic Pallets, the material handling division of Jifram Extrusions, Inc. produces custom built pallets designed specifically for the needs of each customer and their operation. Size, number of stringers, number and thickness of deck boards, static weight capacities, use of casters and other accessories are all tailored to provide customized solutions, not a "one size fits all" pallet.

Custom Build Plastic Pallets also offers an instant quote feature which enables potential customers to determine what a custom-sized pallet solution will cost immediately. Users "build" their pallet online with a simple questionnaire and the quote is returned in seconds.

Jifram Extrusions Inc.'s Custom Built Plastic Pallets are made from 100% recycled rigid PVC plastic and are recyclable. There is no pallet size too big or too small, we build them to each customer's specifications.
